IN THE CLAIMS

Please amend the claims to read as follows:

Listing of Claims

Claims 1-10 (Cancelled).

11. (Currently Amended) A transmitting method comprising:

receiving information which is transmitted from a base station apparatus and which relates to a number of transmission signals, wherein said information specifies a number;

generating, based on said number, a transmission signal comprised of access signals which are consecutive in a time domain and which include an access signal and at least one duplication of said access signal, wherein said access signals are identical in number to said number specified by said information; and

transmitting the same number of access signals said transmission signal, from a terminal apparatus, on at least two consecutive time slots using a resource selected at random from resource candidates, as the number of transmission signals to which the information relates, wherein the access signals are comprised of an access signal and at least one duplication of said access signal.

- 12. (Currently Amended) The transmitting method according to claim 11, wherein the resource candidates are a timing, a transmission frequency, or a spreading code.
 - 13. (Currently Amended) A terminal apparatus comprising:

a receiving section that receives configured to receive information which is transmitted from a base station apparatus and which relates to a number of transmission signals, wherein said information specifies a number;

a generating section configured to generate, based on said number, a transmission signal comprised of access signals which are consecutive in a time domain and which include an access signal and at least one duplication of said access signal, wherein said access signals are identical in number to said number specified by said information; and

a transmitting section that transmits the same number of access signals configured to transmit said transmission signal on at least two consecutive time slots using a resource selected at random from resource candidates, as the number of transmission signals to which the information relates, wherein the access signals are comprised of an access signal and at least one duplication of said access signal.

Claim 14-16. (Cancelled).

17. (New) The terminal apparatus according to claim 13, wherein the resource candidates are a timing, a transmission frequency, or a spreading code.
